Set in 82 acres of glorious sloping parkland, Edinburgh Zoo has been a world-famous feature of the city for over 100 hundred years.

In Autumn 2021, KBI UK was invited to look at creating new accessible pathways for a new Dinosaur Trail. Following detailed consultation, the phased installations began in early 2022 using our KBI UK is a company that HD1500 & HD2000 Flexipave system in Stone Age Bronze finish.

Following the highly successful installation for the Dinosaur Trail, Edinburgh Zoo joined the KBI partner programme. This process saw the zoo's own ground staff receive training in how to mix and install Flexipave surfacing. The zoo can now purchase the raw materials directly from KBI, allowing them to undertake their own resurfacing works.

KBI Flexipave is:

- Highly porous, allowing large volumes of water and air to penetrate the material.
 - Able to be installed on to a number of different bases, including standard compacted stone.
- Dynamic, with the ability to gently flex and adjust to minor movement.
- Able to withstand extreme temperatures without cracking.
 - Available in a variety of colours.
