kbiuk.co.uk

KBI Flexipave is a proven solution for cycle routes. Our company has installed many miles of our unique material across all parts of the UK, receiving praise from users for the friendly way that the material feels whilst riding.

Many of the cycle routes that KBI has resurfaced were previously only accessible in good weather. The use of Flexipave has transformed these routes in to year round facilities.

The material offers a low-maintenance alternative to traditional materials, with the added functionality of being completely porous. In projects such as the Nailsworth Trail in Gloucestershire, KBI was able to install Flexipave directly on to the existing compacted path, reducing time on site and overall cost to the client.

"The 4.5km stretch of trail between Nailsworth and Dudbridge was very rough. We wanted to resurface it to make it more usable for cyclists. A lot of people had complained about the quality of the old surface, and compared to the new Flexipave surface they are worlds apart. The new surface is great, and in addition to cyclists has also allowed wheelchair users to access the paths."
