# PROVEN SURFACING FOR CYCLE ROUTES

KBI Flexipave is a proven solution for cycle routes, installed across the UK and praised by riders for its comfortable feel underfoot and on the bike. Routes once usable only in good weather have become year-round facilities, thanks to a fully porous, low-maintenance material that offers an alternative to traditional surfacing. On projects such as the Nailsworth Trail in Gloucestershire, Flexipave was laid directly onto the existing compacted path, reducing time on site and overall costs for the client.

## SUSTAINABLE SURFACING

Flexipave is a sustainable, high-performing surface for pathways and an especially strong choice for cycle routes. Made using recycled tyres, it diverts waste from incineration and supports carbon reduction targets, as demonstrated on the Water of Leith, where 46,060 tyres were reused. Its porous construction allows water to drain directly through the surface, helping to keep paths usable all year round, while its durability reduces maintenance requirements. Riders and walkers praise its comfortable feel, and it can often be laid directly onto existing paths.

*“The 4.5km stretch of trail between Nailsworth and Dudbridge was very rough. We wanted to resurface it to make it more usable for cyclists. A lot of people had complained about the quality of the old surface, and compared to the new Flexipave surface they are worlds apart. The new surface is great, and in addition to cyclists has also allowed wheelchair users to access the paths.”*

**Simon Maher**
**Stroud District Council, Cycling & Walking Strategy**

**SCIENCE VALE NETWORK**
Delivered 7,100 metres of Flexipave with Oxfordshire County Council for the Science Vale Network, chosen for its green credentials.

**SWINTON GREENWAY**
Upgraded the Swinton Greenway with Flexipave, creating one of the UK's largest porous walkways, chosen for its environmental benefits.

**WATER OF LEITH**
Installed approximately 18,000m² of Flexipave along the 7km Water of Leith Walkway, restoring access for cyclists.
