PRESERVING HISTORIC CHARACTER AT BRAMHALL PARK

The challenge at Bramhall Park Hall was to transform the extensive hall terraces with a surfacing solution that complemented the historic character of this significant Tudor Manor house while also meeting the practical demands of a busy visitor attraction. The chosen solution needed to provide an attractive, seamless finish capable of withstanding regular foot traffic and changing weather conditions, while requiring minimal ongoing maintenance. It also needed to enhance the architecture without compromising the site's historic setting.

ENHANCED PARK ACCESSIBILITY

To meet the project requirements, KBI installed 1,000 m² of Flexistone in an Ireland Green blend alongside 400 m² of Flexipave in Stone Age Bronze. The porous Flexipave system created an accessible and durable pathway linking the woodland to Bramhall Park's gardens, while providing a safer and more resilient surface during the winter months. Together, both systems enhanced the park's appearance, improved accessibility and provided practical, low-maintenance surfaces that complemented the historic surroundings for visitors throughout the year.

ENHANCED ACCESSIBILITY
Flexipave created an accessible pathway connecting the woodland to Bramhall Park's beautiful gardens, improving ease of movement for visitors.

IMPROVED SAFETY
The porous surface helped provide a safer, more reliable pathway, particularly during wet and winter conditions.

DURABLE
Both systems provided robust, low-maintenance surfaces designed to wtihstand regular foot traffic and changing weather conditions.

NATURAL AESTHETICS
The Ireland Green Flexistone and Stone Age Bronze Flexipave blends complement the park's historic surroundings and landscaped gardens.

LONG-TERM DURABILITY
The robust surface systems are designed to withstand everyday use and environmental conditions, delivering a lasting solution.

SPECIFICATION:
1000m² of Flexistone Ireland Green blend

400m² of Flexipave Stone Age Bronze
